

JENSON T. C. LAU, PhD.

PEOPLE ANALYTICS | PEOPLE SCIENCE | ORGANIZATIONAL RESEARCH

jenson1232001@gmail.com | (206) 488-7847 | [Portfolio](#) | [LinkedIn](#)

PROFESSIONAL SUMMARY

People Analytics professional with a Ph.D. in Organizational Behavior and 7+ years of experience applying psychometrics, experimental design, and workforce analytics to employee and organizational questions. Builds reproducible analyses in R, SQL, and Python and translates complex findings into decision-ready recommendations.

CORE SKILLS

People Analytics: Employee surveys, engagement analytics, workforce trends, leadership assessment, organizational diagnosis

Research Methods: Psychometrics, scale validation, factor analysis, mediation, multilevel modeling, experiments, Monte Carlo simulation, power analysis

Technical: R, SQL, Python, Qualtrics, GitHub, dashboards, data visualization, automated reporting, reproducible workflows

SELECTED PEOPLE ANALYTICS & RESEARCH PROJECTS

Workforce Capacity & Accreditation Analytics | University of Washington School of Medicine 2025 - 2026

- Analyzed multi-year sick-leave patterns across medical training programs and translated absence trends into FTE-equivalent workforce impact to inform staffing, wellness, and operational-risk discussions.
- Contributed to automated reporting for 128 residency and fellowship programs, helping leadership synthesize program documents, monitor risk indicators, and prioritize follow-up actions.

Simulation-Based Power Analysis for Mediation Research | University of Washington Dissertation 2022 - 2026

- Built reusable R simulation pipelines to evaluate statistical power across alternative sample sizes, effect sizes, measurement conditions, and mediation structures; translated findings into practical guidance for study planning and interpretation.

Impact of Covariates on Mediation Models | University of Washington Dissertation 2022 - 2026

- Designed Monte Carlo simulations testing how covariate strength, predictor-covariate correlations, multicollinearity, and model structure affected power and estimation; found that covariates did not uniformly improve power and high collinearity could reduce performance.

PROFESSIONAL EXPERIENCE

Graduate Research Assistant | University of Washington June 2021 - June 2026

- Led 10+ end-to-end organizational studies on leadership, employee experience, communication, decision-making, and workplace behavior, translating behavioral data into practical recommendations.
- Designed and analyzed surveys, experiments, and longitudinal studies using psychometrics, regression, mediation, multilevel modeling, and scale-validation methods.
- Built reproducible R workflows for data cleaning, modeling, visualization, and reporting, improving analytical consistency and reducing repetitive manual work.
- Developed simulation and power-analysis tools that helped research teams evaluate sample-size requirements, measurement quality, and the reliability of statistical conclusions.

Graduate Research Assistant | Temple University August 2019 - May 2021

- Supported 40+ behavioral and organizational studies involving 20,000+ participants and validated psychological measures through reliability, construct-validity, and data-quality analyses.
- Cleaned, harmonized, and documented structured and unstructured datasets, including survey responses, qualitative text, behavioral records, and cross-national archival indicators.
- Validated psychological and organizational measures by evaluating reliability, construct validity, and data quality across survey-based projects.

Research Assistant | National University of Singapore June 2017 - April 2019

- Designed and administered Qualtrics surveys and experiments, managed participant data, and produced descriptive statistics and visual summaries for organizational research.

EDUCATION

University of Washington - Ph.D. in Organizational Behavior June 2026

Temple University - M.S. in Business Research May 2021

Georgia Institute of Technology - B.S. in Electrical Engineering December 2015
