PROFESSIONAL SUMMARY

People Scientist with a PhD background and 7+ years of experience in industrial psychology, psychometrics, and workforce analytics. I lead end-to-end analyses and experiments that integrate quantitative, qualitative, and unstructured data to understand employee experience, organizational performance, and workforce outcomes. My work emphasizes rigorous methods, scalable analysis, and translating complex people data into actionable insights for executive decision-making.

SKILLS & TOOLS

Methods & Analytics: Experimental design, multilevel modeling, A/B testing, mediation analysis, factor analysis, survey design, Monte Carlo simulation, power analysis, item response theory, classical test theory, scale development & validation

Technical Tools: R, SQL, GitHub, R Markdown, Python, Qualtrics, data visualization, automated reporting, dashboards, reproducible pipelines

People Science: 360 leadership survey, engagement analytics, leadership feedback, workforce trends

EXPERIENCE

Graduate Research Assistant, University of Washington

June 2021-Present

- Led end-to-end quantitative research on employee behavior, leadership, well-being, and organizational perceptions across survey, experimental, longitudinal, and cross-national designs.
- Designed and analyzed randomized interventions, behavioral studies, repeated-measures surveys, and mediation models to identify drivers of workforce outcomes and evaluate mechanisms of change.
- Built scalable R-based simulation and power-analysis frameworks to inform research design, improve statistical precision, and reduce the risk of underpowered analyses.
- Applied regression, mediation, multilevel/mixed-effects modeling, structural equation modeling, and longitudinal treatment-effect models to generate actionable insights from complex people data.
- Integrated structured survey data with qualitative and unstructured text data to identify latent beliefs, behavioral patterns, and organizational risks.
- Developed reproducible R pipelines for data cleaning, QA, modeling, visualization, and reporting, improving consistency and scalability across research projects.
- Translated technical findings into practical recommendations for leadership development, employee engagement, communication strategy, intervention design, and organizational decision-making.

Graduate Research Assistant, Temple University

August 2019- May 2021

- Supported large-scale behavioral and organizational research programs across 40+ studies and 20,000+ participants, with a focus on employee behavior, leadership, ethical decision-making, social perception, and real-world behavioral outcomes.
- Partnered with faculty to validate psychological and organizational measures, ensuring scale reliability, construct validity, and data quality across survey-based research projects.
- Designed, cleaned, and managed structured and unstructured datasets, including survey responses, qualitative text data, behavioral data, public health indicators, traffic accident records, and international sports-event data.
- Integrated large-scale archival datasets across countries and time periods to examine how external events, including COVID-19 trends and high-profile football matches, shaped public attitudes, leader approval, sleep disruption, and behavioral risk.
- Assisted with survey design and data collection for multi-study research on moral identity, humor, ethical leadership, workplace liking, and interpersonal evaluations.
- Prepared reproducible analysis-ready datasets for faculty-led publications by conducting data cleaning, harmonization, quality checks, variable construction, and documentation.
- Translated complex behavioral and organizational research questions into measurable constructs, scalable datasets, and actionable empirical analyses.

Research Assistant, National University of Singapore

June 2017- April 2019

- Assisted with quantitative data preparation, descriptive analysis, and visual storytelling to support evidence-based organizational decision-making.

PUBLICATIONS

Peer-reviewed publications in Proceedings of the National Academy of Sciences (PNAS), Journal of Personality and Social Psychology, The British Medical Journal

EDUCATION

University of Washington | PhD, Organizational Behavior (June 2026)
Temple University | MS, Business Research (May 2021)
Georgia Institute of Technology | BSc, Electrical Engineering (December, 2015)
